

Climate Change

Climate change requires change. FOURSSES, Inc. helps you manage that change by understanding your baseline greenhouse gas (GHG) and carbon emissions; strategize and plan for change to meet future 2030 and 2050 targets for emission reductions, and help you implement and innovate to achieve reductions and your climate goals.

GREENHOUSE GASES (GHG) and CARBON EMISSIONS

FOURSES calculates greenhouse gas emissions, baseline emissions measurements, CO₂e emissions, and short-lived climate pollutants.

PRODUCT CARBON FOOTPRINT (PCF)

We complete product carbon footprints (PCF) at the product level that measures greenhouse gas (GHG) emissions related to goods from the extraction raw materials and manufacturing through its use and final re-use, recycling or disposal.

REPORTING AND REDUCTIONS

FOURSES prepares greenhouse gas emissions reports and help you comply with GHG Reduction Plans, Carbon Reduction plans and submit regulatory reports.

CARBON OFFSET, CARBON REDUCTIONS, EMISSION CREDITS

FOURSES helps you reduce your carbon footprint. This may include obtaining carbon offsets and credits to obtain carbon neutral or negative status. We can also help you develop your own carbon offset program and apply for emission credits from reductions in your operations.

ENERGY SOLUTIONS TO IMPLEMENT AND INNOVATE

We review your energy and carbon footprint and look for solutions through renewable portfolios, micro-grids, and LEED design projects.
